

AscenKorea Inc.

**AKMG3**

**GNSS Module**

**Preliminary Data Sheet**

Revision : V0D

The AKMG3 is a 5<sup>th</sup> generation stand-alone GPS module with lightning fast TTFF, ultra high sensitivity (-165dBm), and exceptional low power consumption in a small form factor (11.5\*13\*2.1mm)

This document is the exclusive property of AscenKorea Inc. and should not be distributed, reproduced, into any other format without prior permission of AscenKorea Inc. Specifications subject to change without prior notice.

# 1. Functional Description

## 1.1 Overview

The AscenKorea AKMG3 module utilizes the MediaTek new generation GNSS Chipset MT3333 that support various location and navigation applications, including autonomous GPS, GLONASS, QZSS, SBAS(note) ranging (WAAS, EGNOS, GAGAN, MSAS), QZSS, DGPS(RTCM) and AGPS. It support up to 210 PRN channels with 99 search channels and 33 simultaneous tracking channels.

It is the industry's highest level of sensitivity (-165dBm) and instant Time-to-First Fix (TTFF). Precise GNSS signal processing give the ultra-precise positioning under low receptive, high velocity conditions. Up to 12 multi-tone active interference canceller (ISSCC2011 award), customer can have more flexibility in system design.

Power management design makes AKMG3 easily integrated into your system without extra voltage regulator. AKMG3 allows direct battery connection, no need any external LDO and gives customers plenty of choices for their application circuit.

The excellent low power consumption of AKMG3 make it easier to applied to power sensitive devices, especially portable applications, need not worry about operating time anymore and user can get more fun.

It also combined with many advanced features including AlwaysLocate™, EASY™, EPO™, and logger function.

### Application:

- ✓ Handheld Device
- ✓ Tablet PC/PLB/MID
- ✓ M2M application
- ✓ Asset management
- ✓ Security industry
- ✓ Surveillance

## 1.2 Highlights and Features

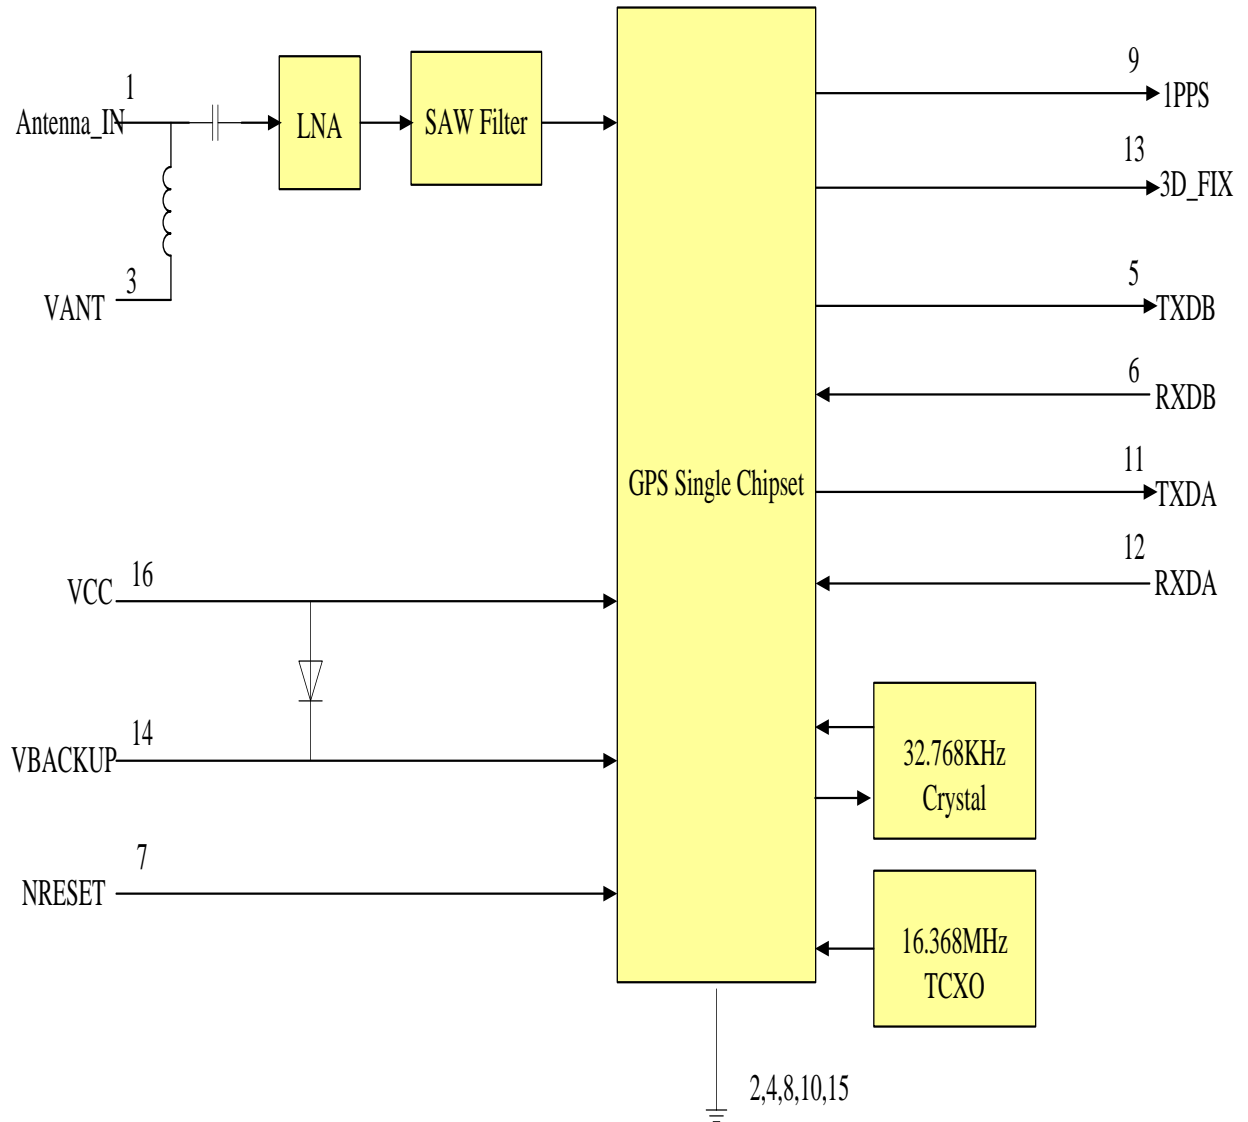

- ◆ 33 tracking/ 99 acquisition-channel GPS/GLONASS receiver
- ◆ Supports QZSS, SBAS(WAAS, EGNOS, GAGAN, MSAS) ranging
- ◆ Ultra-High Sensitivity: -165dBm
- ◆ High Update Rate: up to 10Hz<sup>(note1)</sup>
- ◆ 12 multi-tone active interference canceller<sup>(note2)</sup> [ISSCC 2011 Award -Section 26.5]  
([http://isscc.org/doc/2011/isscc2011.advanceprogrambooklet\\_abstracts.pdf](http://isscc.org/doc/2011/isscc2011.advanceprogrambooklet_abstracts.pdf))
- ◆ High accuracy 1-PPS timing support for Timing Applications ( $\pm 10$ ns jitter)
- ◆ AGPS Support for Fast TTFF (EPO™ Enable 7 days/14 days )
- ◆ EASY™<sup>(note2)</sup>: Self-Generated Orbit Prediction for instant positioning fix
- ◆ AlwaysLocate™<sup>(note2)</sup> Intelligent Algorithm (Advance Power Periodic Mode) for power saving
- ◆ Logger function Embedded<sup>(note2)</sup>
- ◆ Gtop Firmware Customization Services
- ◆ GPS+GLONASS Consumption current(@3.3V):
  - Acquisition: 35mA Typical
  - Tracking: 29mA Typical
- ◆ E911, RoHS, REACH compliant
- ◆ CE, FCC Certification

Note 1: SBAS can only be enabled when update rate is less than or equal to 5Hz.

Note2: Some features need special firmware or command programmed by customer, please refer to G-top documents "PMTK command List" and "Firmware check list\_C33".

## 1.3 System Block Diagram

This document is the exclusive property of AscenKorea Inc. and should not be distributed, reproduced, into any other format without prior permission of AscenKorea Inc. Specifications subject to change without prior notice.

## 1.4 Multi-tone active interference canceller

Because different application (Wi-Fi , GSM/GPRS,3G/4G,Bluetooth )are integrated into navigation system , the harmonic of RF signal will influence the GPS reception , The multi-tone active interference canceller (abbr: MTAIC ) can reject external RF interference which come from other active components on the main board , to improve the capacity of GPS reception without any needed HW change in the design .AKMG3 can cancel up to 12 independent channel interference continuous wave (CW)

## 1.5 1PPS

A pulse per second (1 PPS) is an electrical signal that very precisely indicates the start of a second. Depending on the source, properly operating PPS signals have an accuracy ranging  $\pm 10\text{ns}$ .

1 PPS signals are used for precise timekeeping and time measurement. One increasingly common use is in computer timekeeping, including the NTP protocol. A common use for the PPS signal is to connect it to a PC using a low-latency, low-jitter wire connection and allow a program to synchronize to it:

AKMG3 supplies the high accurate 1PPS timing to synchronize to GPS time after 3D-Fix. A power-on output 1pps is also available for customization firmware settings.

## 1.6 AGPS Support for Fast TTFF (EPO™)

The AGPS (EPO™) supply the predicated Extended Prediction Orbit data to speed TTFF ,users can download the EPO data to GPS engine from the FTP server by internet or wireless network ,the GPS engine will use the EPO data to assist position calculation when the navigation information of satellites are not enough or weak signal zone . About the detail, please link [AscenKorea website](#) .

## 1.7 EASY™

The EASY™ is embedded assist system for quick positioning, the GPS engine will calculate and predict automatically the single emperies ( Max. up to 3 days )when power on ,and save the predict information into the memory , GPS engine will use these information for positioning if no enough information from satellites , so the function will be helpful for positioning and TTFF improvement under indoor or urban condition , the Backup power (VBACKUP) is necessary .

This document is the exclusive property of AscenKorea Inc. and should not be distributed, reproduced, into any other format without prior permission of AscenKorea Inc. Specifications subject to change without prior notice.

copyright © AscenKorea Inc. All right reserved

Figure 1.12-1 EASY System operation

Please refer to the Fig 1.12-1, When GPS device great the satellite information from GPS satellites, the GPS engine automatically pre-calculate the predict orbit information for 3 days

The GPS device still can quickly do the positioning with EASY™ function under weak GPS signal.

## 1.8 AlwaysLocate™ (Advance Power Periodic Mode)

Embedded need to be executed full y all the time , the algorithm can be set by different necessary to decide the operation level of GPS function , reduce power consumption , it will suffer positing accuracy to get the target of power saving and extend the usage time of product . (The positioning accuracy of reporting location < 50m (CEP).)

## 1.9 Embedded Logger function

The Embedded Logger function don't need host CPU (MCU ) and external flash to handle the operation , GPS Engine will use internal flash (embedded in GPS chipset ) to log the GPS data (Data format : UTC, Latitude , longitude, Valid ,Checksum ), the max log days can up to 2 days under AlwaysLocate™ condition .<sup>Note</sup>

Note: Data size per log was shrunk from 24 bytes to 15 bytes.

## 2.3 Pin Configuration

## 2.4 Pin Assignment

Pin	Name	I/O	Description & Note
1	Antenna_IN	I	Antenna Signal Input
2	GND	p	Ground
3	VANT	PI	External Antenna power input
4	GND	P	Ground
5	TXDB	O	Serial Data Output
6	RXDB	I	Serial Data Input for DGPS RTCM data streaming
7	NRESET	I	Reset Input, Low Active
8	GND	P	Ground
9	1PPS	O	1PPS Time Mark Output 2.8V CMOS Level
10	GND	P	Ground
11	TXDA	O	Serial Data Output A for NMEA output (TTL)
12	RXDA	I	Serial Data Input A for Firmware update (TTL)
13	3D_FIX	O	3D-Fix Indicator
14	VBACKUP	PI	Backup power input for RTC & navigation data keep
15	GND	P	Ground
16	VCC	PI	Main DC power input

## 2.5 Description of I/O Pin

### Antenna\_IN, Pin1

This is the GNSS RF signal input pin, which can be connected to a passive antenna or an active antenna.

### GND, Pin2, Pin4, Pin8, Pin10, Pin15

Ground

### VANT, Pin3

The power supply input for external active antenna. The input voltage should be kept from **2.5V to 5V**.

### TXDB, Pin5

This is the UART transmitter of the module. It is used for customization by firmware. If not used, keep floating.

### RXDB, Pin6

This pin receive DGPS data of RTCM protocol (TTL level), if not used keep floating

### NRESET, Pin7

Low active, it causes the module to reset. If not used, keep floating.

### 1PPS, Pin9

This pin provides one pulse-per-second output from the module and synchronizes to GPS time.

Keep floating if not used.

### TXDA, Pin11

This is the UART-A transmitter of the module. It outputs GPS information for application.

This document is the exclusive property of AscenKorea Inc. and should not be distributed, reproduced, into any other format without prior permission of AscenKorea Inc. Specifications subject to change without prior notice.

**AscenKorea Inc.**

Rm. 710, 7F, Halla Sigma Valley B/D, Gasandigital 2Ro 53, Geumcheon-gu, Seoul, Korea

Tel: +82 02 858 7810 Fax: +82 02 858 7813/ [www.AscenKorea.com](http://www.AscenKorea.com) /[sales@ascen.co.kr](mailto:sales@ascen.co.kr)

copyright © AscenKorea Inc. All right reserved

## RXDA, Pin12

This is the UART-A receiver of the module. It is used to receive commands from system.

## 3D\_FIX, Pin13

The 3D\_FIX is assigned as a fix flag output. The timing behavior of this pin can be configured by custom firmware for different applications (Example: waking up host MCU). If not used, keep floating.

### ■ Before 2D Fix

The pin should continuously output one-second high-level with one-second low-level signal

### ■ After 2D or 3D Fix

The pin should continuously output low-level signal

Low

## VBACKUP, Pin14

This connects to the backup power of the GPS module. Power source (such as battery) connected to this pin will help the GPS chipset in keeping its internal RTC running when the main power source is turned off. The voltage should be kept between **2.0V~4.3V, Typical 3.0V**.

**IF VBACKUP power was not reserved, the GNSS module will perform a lengthy cold start every time it is powered-on because previous satellite information is not retained and needs to be re-transmitted.**

If not used, keep open.

## VCC, Pin16

The main DC power supply for the module. The voltage should be kept between from **3.0V to 4.3V**. The ripple must be limited under 50mVpp (Typical: 3.3V).

## 2.6 Specification List

	Description
<b>GNSS Solution</b>	MTK MT3333
<b>Frequency</b>	GPS L1, 1575.42MHz GLONASS L1, 1598.0625~1605.375MHz
<b>Sensitivity<sup>1</sup></b>	Acquisition: -148dBm, cold start Reacquisition: -163dBm Hot start Tracking: -165dBm
<b>SV Number</b> <b>GPS</b> <b>GLONASS</b>	#1~32 #65~96
<b>TTF</b> (No. of SVs>4, C/N>40dB, PDop<1.5)	Hot start: 1 second typical Warm start: 33 seconds typical Cold start: 35 seconds typical, 60 seconds Max
<b>Position Accuracy</b>	Without aid: 3.0m (50% CEP) DGPS(SBAS(WAAS, EGNOS, MSAS)): 2.5m (50% CEP)
<b>Velocity Accuracy</b>	Without aid : 0.1m/s DGPS(SBAS(WAAS, EGNOS, MSAS, GAGAN)): 0.05m/s
<b>Timing Accuracy</b> <b>(1PPS Output)</b>	±10 ns RMS
<b>Altitude</b>	Maximum 18,000m (60,000 feet)
<b>Velocity</b>	Maximum 515m/s (1000 knots)
<b>Acceleration</b>	Maximum 4G
<b>Update Rate</b>	1Hz (default), maximum 10Hz
<b>Baud Rate</b>	9600 bps (default)
<b>DGPS</b>	SBAS(default) [QZSS, WAAS, EGNOS, MSAS, GAGAN]
<b>AGPS</b>	Support
<b>Power Supply</b>	VCC : 3.0V to 4.3V ; VBACKUP : 2.0V to 4.3V
<b>Current Consumption</b> <b>@ 3.3V, 1Hz Update Rate</b>	GPS+GLONASS 35mA acquisition, 29mA tracking
<b>Backup Power</b> <b>Consumption@ 3V</b>	7uA TYP.
<b>Working Temperature</b>	-40 °C to +85 °C
<b>Dimension</b>	11.5 x 13 x 2.1 mm, SMD
<b>Weight</b>	1g

## 2.7 Absolute Maximum Ratings

The voltage applied for VCC should not exceed 4.3VDC.

	Symbol	Min.	Typ.	Max.	Unit
Power Supply Voltage	VCC	3.0	3.3	4.3	V
Backup battery Voltage	VBACKUP	2.0	3.0	4.3	V

## 2.8 Operating Conditions

	Condition	Min.	Typ.	Max.	Unit
Operation supply Ripple Voltage	—	—	—	50	mVpp
RX0 TTL H Level	—	2.0	—	VCC	V
RX0 TTL L Level	—	0	—	0.8	V
TX0 TTL H Level	—	2.4	—	2.8	V
TX0 TTL L Level	—	0	—	0.4	V

## 2.9 GPS/GLONASS External Antenna Specification(Recommended)

It is important that the antenna gets a clear view of the sky and is positioned on a surface level to the horizon for best results. The following specification has to meet for the use reference design.

Characteristic	Specification
Polarization	Right-hand circular polarized
Frequency Received	1.575GHz~1.615GHz
Power Supply	3.3V
DC Current	3mA < IDC < 30mA at 3.3V
Total Gain	+ 25dBi
Output VSWR	< 2.5
Impedance	50ohm
Noise Figure	< 1.5dB

## 3. Protocols

### 3.1 NMEA Output Sentences

**Table-1** lists each of the NMEA output sentences specifically developed and defined by MTK for use within MTK products

Table-1: NMEA Output Sentence	
Option	Description
GGA	Time, position and fix type data.
GSA	GNSS receiver operating mode, active satellites used in the position solution and DOP values.
GSV	The number of GNSS satellites in view satellite ID numbers, elevation, azimuth, and SNR values.
RMC	Time, date, position, course and speed data. Recommended Minimum Navigation Information.
VTG	Course and speed information relative to the ground.

**Table-2** lists NMEA output sentences in GPS system and GNSS system.

Table-2: NMEA Output Sentence for GPS and GNSS					
System	GGA	GSA	GSV	RMC	VTG
GPS	GPGGA	GPGSA	GPGSV	GPRMC	GPVTG
GNSS (GPS+Glonass)	GPGGA	GNGSA	GPGSV GLGSV	GPRMC <sup>1</sup> or GNRMC	GPVTG

Note1: When GNSS system work before 3D Fix then RMC output sentence is GPRMC and change to GNRMC when 3D Fixed

Example:

GPS system:

```
$GPGGA,064951.000,2307.1256,N,12016.4438,E,1,8,0.95,39.9,M,17.8,M,,*65

$GPVTG,165.48,T,,M,0.03,N,0.06,K,A*37
```

## GGA—Fixed Data. Time, Position and fix related data

**Table-3** contains the values for the following example :

\$GPGGA,064951.000,2307.1256,N,12016.4438,E,1,8,0.95,39.9,M,17.8,M,,\*65

Table-3: GGA Data Format			
Name	Example	Units	Description
Message ID	\$GPGGA		GGA protocol header
UTC Time	064951.000		hhmmss.sss
Latitude	2307.1256		ddmm.mmmm
N/S Indicator	N		N=north or S=south
Longitude	12016.4438		dddmm.mmmm
E/W Indicator	E		E=east or W=west
Position Fix Indicator	1		See <b>Table-4</b>
Satellites Used	8		Range 0 to 14
HDOP	0.95		Horizontal Dilution of Precision
MSL Altitude	39.9	meters	Antenna Altitude above/below mean-sea-level
Units	M	meters	Units of antenna altitude
Geoidal Separation	17.8	meters

### 3.3 Firmware Customization Services

AscenKorea also offers flexible, value-adding GPS firmware customization services that maximizes the over system efficiencies and power consumptions. Latest functions like Binary Mode, 1-Sentence Output, Geo-fencing and Last Position Retention, please see our website at [www.AscenKorea.com](http://www.AscenKorea.com) under Products / GPS Modules / Software Services for more details.

**Note:** Not all firmware customization services listed below are supported by FGPMOSL3C. Please contact AscenKorea Sales or Technical Support for more details.

## 4. Reference Design

This chapter introduces the reference schematic design for the best performance. Additional tips and cautions on design are well documented on Application Note, which is available upon request.

#### 4.1 Patch (Passive) Antenna

When using a passive antenna, please connect the antenna directly to Pin1, Antenna IN.

**Note:**

1. Ferrite bead L1 is added for power noise reduction.
2. C1 and C2 bypass capacitor should be put near the module.  
For C3, the value chosen depends on the amount of system noise, the range from 1uF to 100uF is reasonable.
3. Damping resistors R3 and R4 could be modified based on system application for EMI.
4. Resistor R2 is added for Pull-up to VCC.
5. If you need more support and information on antenna implementation, please directly contact us at [sales@ascen.co.kr](mailto:sales@ascen.co.kr) for further services.

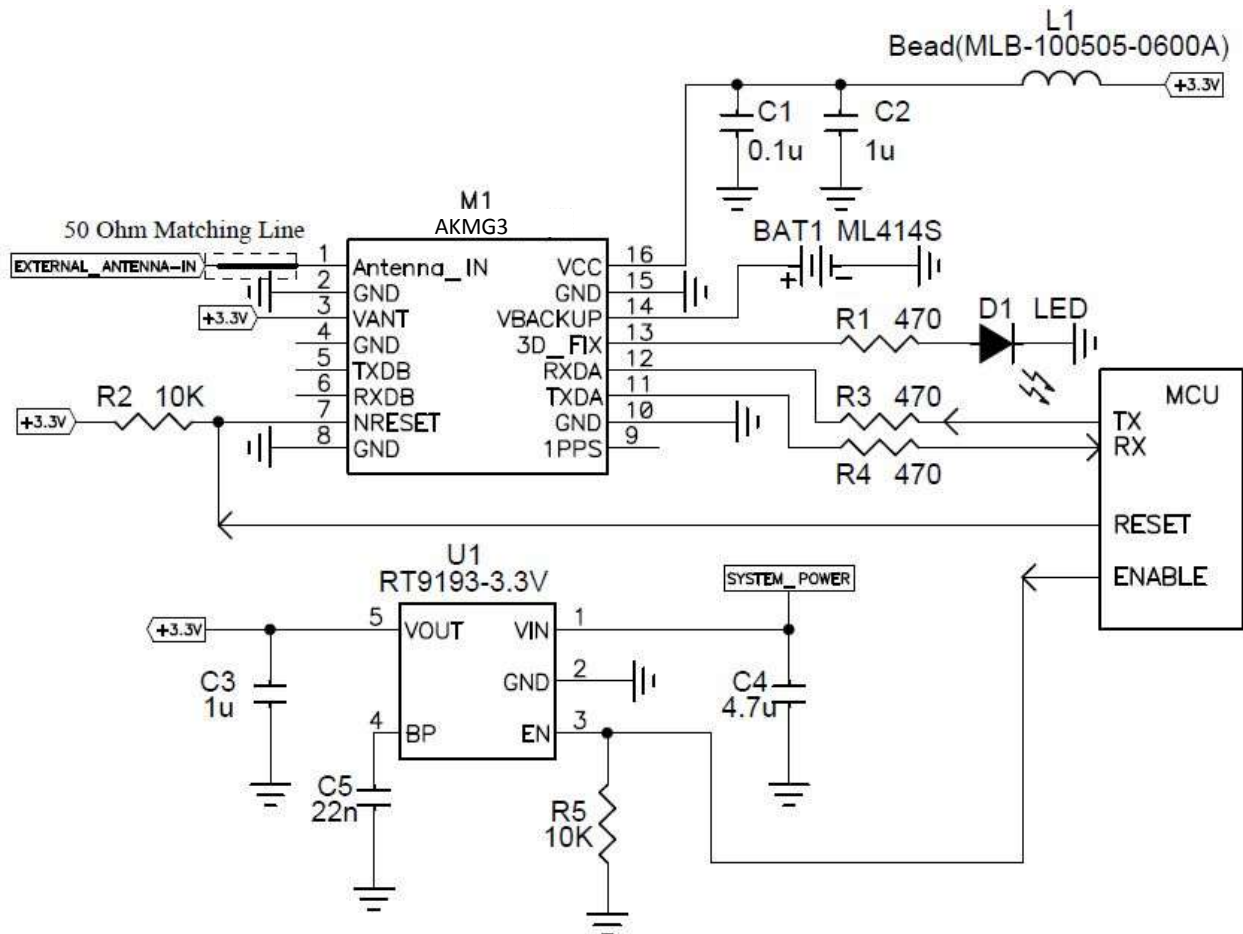

This document is the exclusive property of AscenKorea Inc. and should not be distributed, reproduced, into any other format without prior permission of AscenKorea Inc. Specifications subject to change without prior notice.

copyright © AscenKorea Inc. All right reserved

## 4.2 Active Antenna

When using an active antenna, please connect the antenna directly to Pin1, Antenna\_IN.

**Note:**

1. Ferrite bead L1 is added for power noise reduction.
2. C1 and C2 bypass capacitor should be put near the module.
3. For C3, the value chosen depends on the amount of system noise, the range from 1uF to 100uF is reasonable.
4. Damping resistors R3 and R4 could be modified based on system application for EMI.
5. Resistor R2 is added for Pull-up to VCC.
6. If you need more support and information on antenna implementation, please directly contact us at [sales@ascen.co.kr](mailto:sales@ascen.co.kr) for further services.

## 5. Packing and Handling

GPS modules, like any other SMD devices, are sensitive to moisture, electrostatic discharge, and temperature. By following the standards outlined in this document for AscenKorea GPS module storage and handling, it is possible to reduce the chances of them being damaged during production set-up. This document will go through the basics on how AscenKorea packages its modules to ensure they arrive at their destination without any damages and deterioration to performance quality, as well as some cautionary notes before going through the surface mount process.

**Please read the sections II to V carefully to avoid damages permanent damages due to moisture intake**

**GPS receiver modules contain highly sensitive electronic circuits and are electronic sensitive devices and improper handling without ESD protections may lead to permanent damages to the modules. Please read section VI for more details.**

### 5.1 Moisture Sensitivity

AscenKorea GPS modules are moisture sensitive, and must be pre-baked before going through the solder reflow process. It is important to know that:

**AscenKorea GPS modules must complete solder reflow process in 72 hours after pre-baking.**

This maximum time is otherwise known as “Floor Life”

If the waiting time has exceeded 72 hours, it is possible for the module to suffer damages during the solder reflow process such as cracks and delamination of the SMD pads due to excess moisture pressure.

This document is the exclusive property of AscenKorea Inc. and should not be distributed, reproduced, into any other format without prior permission of AscenKorea Inc. Specifications subject to change without prior notice.

## 5.2 Tape Reel Packing Information

### 1Kpcs/Reel

Spec: H:  $24.5 \pm 1.5$ , T:  $2.2 \pm 0.2$ , D:  $99 \pm 1.5$

Note: 13" Reel, Material : P.S

Unit: (mm)

Figure 1: Reel Dimension

A0	11.9±0.10
B0	13.4±0.10
K0	2.5±0.10

Unit: (mm)

Figure 2: Tape Dimension

The moisture color coded card provides an insight to the relative humidity percentage (RH). When the GPS modules are taken out, it should be around or lower than 30% RH level.

Outside each electrostatic bag is a caution label for moisture sensitive device.

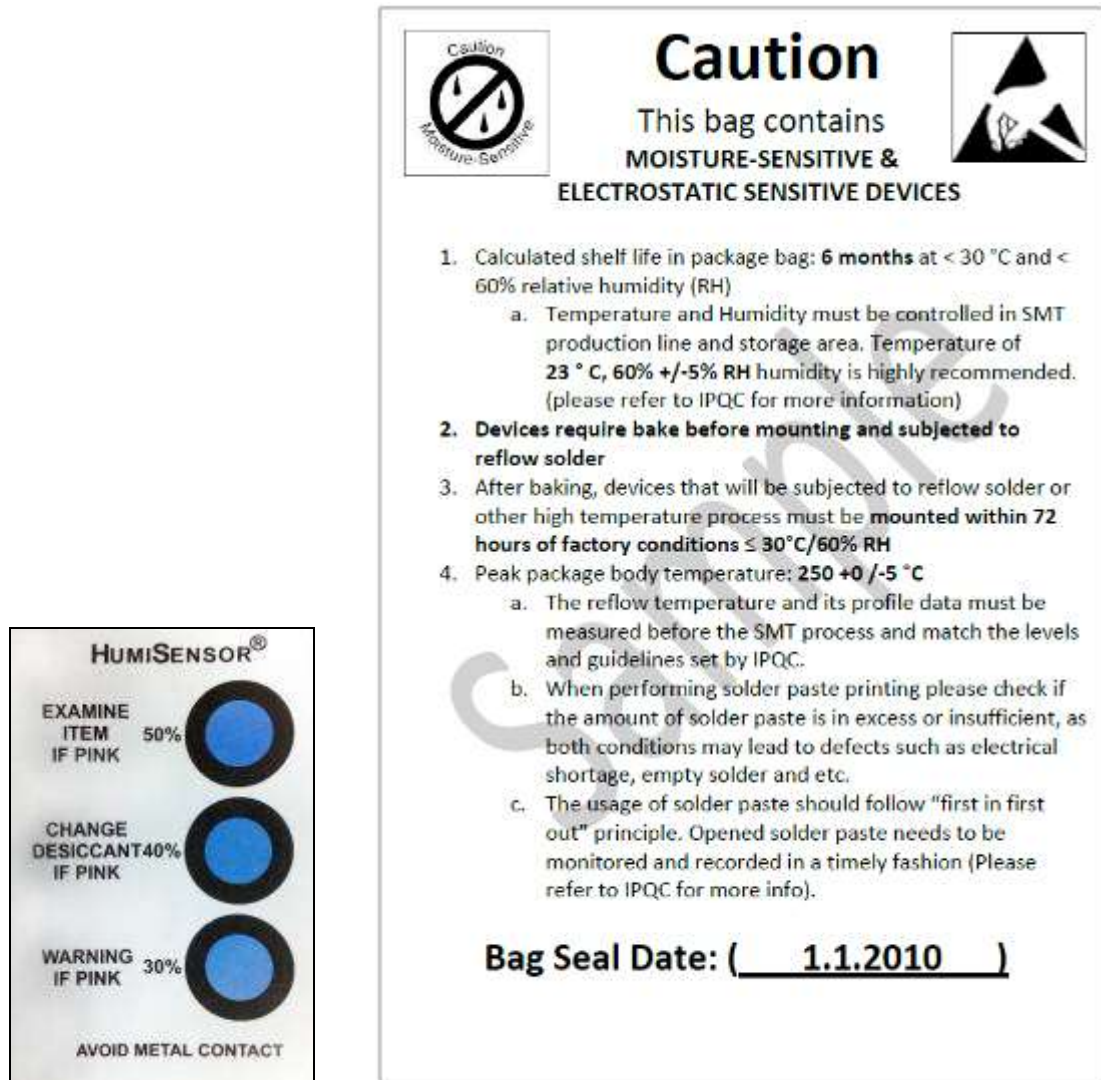

Figure 3: Example of moisture color coded card and caution label

## 5.3 Storage and Floor Life Guideline

Since AscenKorea modules must undergo solder-reflow process in 72 hours after it has gone through pre-baking procedure, therefore if it is not used by then, it is recommended to store the GPS modules in dry places such as dry cabinet.

The approximate shelf life for AscenKorea GPS modules packages is 6 months from the bag seal date, when store in a non-condensing storage environment (<30°C/60% RH)

**It is important to note that it is a required process for AscenKorea GPS modules to undergo pre-baking procedures, regardless of the storage condition.**

## 5.4 Drying

Because the vapor pressures of moisture inside the GPS modules increase greatly when it is exposed to high temperature of solder reflow, in order to prevent internal delaminating, cracking of the devices, or the “popcorn” phenomenon, it is a **necessary requirement** for AscenKorea GPS module to undergo pre-baking procedure before any high temperature or solder reflow process.

The recommendation baking time for AscenKorea GPS module is as follows:

- ✓ **60°C for 8 to 12 hours**

Once baked, the module’s floor life will be “reset”, and has additional 72 hours in normal factory condition to undergo solder reflow process.

**Please limit the number of times the GPS modules undergoes baking processes as repeated baking process has an effect of reducing the wetting effectiveness of the SMD pad contacts. This applies to all SMT devices.**

**Oxidation Risk: Baking SMD packages may cause oxidation and/or intermetallic growth of the terminations, which if excessive can result in solderability problems during board assembly. The temperature and time for baking SMD packages are therefore limited by solderability considerations. The cumulative bake time at a temperature greater than 90°C and up to 125°C shall not exceed 96 hours. Bake temperatures higher than 125°C are now allowed.**

This document is the exclusive property of AscenKorea Inc. and should not be distributed, reproduced, into any other format without prior permission of AscenKorea Inc. Specifications subject to change without prior notice.

copyright © AscenKorea Inc. All right reserved

## 5.5 ESD Handling

**Please carefully follow the following precautions to prevent severe damage to GPS modules.**

AscenKorea GPS modules are sensitive to electrostatic discharges, and thus are Electrostatic Sensitive Devices (ESD). Careful handling of the GPS modules and in particular to its patch antenna (if included) and RF\_IN pin, must follow the standard ESD safety practices:

- ✓ Unless there is a galvanic coupling between the local GND and the PCB GND, then the first point of contact when handling the PCB shall always be between the local GND and PCB GND.
- ✓ Before working with RF\_IN pin, please make sure the GND is connected
- ✓ When working with RF\_IN pin, do not contact any charges capacitors or materials that can easily develop or store charges such as patch antenna, coax cable, soldering iron.
- ✓ Please do not touch the mounted patch antenna to prevent electrostatic discharge from the RF input
- ✓ When soldering RF\_IN pin, please make sure to use an ESD safe soldering iron (tip).

## 6. Reflow Soldering Temperature Profile

The following reflow temperature profile was evaluated by AscenKorea and has been proven to be reliable qualitatively. Please contact us beforehand if you plan to solder this component using a deviated temperature profile as it may cause significant damage to our module and your device.

All the information in this sheet can only be used only for Pb-free manufacturing process.

### 6.1 SMT Reflow Soldering Temperature Profile (Reference Only)

Average ramp-up rate (25 ~ 150°C): 3°C/sec. max.

Average ramp-up rate (270°C to peak): 3°C/sec. max.

Preheat: 175 ± 25°C, 60 ~ 120 seconds

Temperature maintained above 217°C: 60~150 seconds

Peak temperature: 250 +0/-5°C, 20~40 seconds

Ramp-down rate: 6°C/sec. max.

Time 25°C to peak temperature: 8 minutes max.

This document is the exclusive property of AscenKorea Inc. and should not be distributed, reproduced, into any other format without prior permission of AscenKorea Inc. Specifications subject to change without prior notice.

copyright © AscenKorea Inc. All right reserved

	Details	Suggestions	Notes
1	Before proceeding with the reflow-soldering process, the GPS module must be pre-baked.	Pre-bake Time:  6 Hours @ 60°±5°C or  4 Hours @ 70°±5°C	<b>The maximum tolerated temperature for the tray is 100°C.</b>  <b>After the pre-baking process, please make sure the temperature is sufficiently cooled down to 35°C or below in order to prevent any tray deformation.</b>
2	Because PCBA (along with the patch antenna) is highly endothermic during the reflow-soldering process, extra care must be paid to the GPS module's solder joint to see if there are any signs of cold weld(ing) or false welding.	The parameters of the reflow temperature must be set accordingly to module's reflow-soldering temperature profile.	<b>Double check to see if the surrounding components around the GPS module are displaying symptoms of cold weld(ing) or false welding.</b>
3	Special attentions are needed for PCBA board during reflow-soldering to see if there are any symptoms of bending or deformation to the PCBA board, possibility due to the weight of the module. If so, this will cause concerns at the latter half of the production process.	A loading carrier fixture must be used with PCBA if the reflow soldering process is using rail conveyors for the production.	<b>If there is any bending or deformation to the PCBA board, this might causes the PCBA to collide into one another during the unloading process.</b>
4	Before the PCBA is going through the reflow-soldering process, the production operators must check by eyesight to see if there are positional offset to the module, because it will be difficult to readjust after the module has gone through reflow-soldering process.	The operators must check by eyesight and readjust the position before reflow-soldering process.	<b>If the operator is planning to readjust the module position, please do not touch the patch antenna while the module is hot in order to prevent rotational offset between the patch antenna and module</b>

**Note:** References to patch antenna is referred to GPS modules with integrated Patch-on-top antennas (PA/Gms Module Series), and may not be applicable to all GPS modules.

This document is the exclusive property of AscenKorea Inc. and should not be distributed, reproduced, into any other format without prior permission of AscenKorea Inc. Specifications subject to change without prior notice.

**AscenKorea Inc.**

Rm. 710, 7F, Halla Sigma Velley B/D, Gasandigital 2Ro 53, Geumcheon-gu, Seoul, Korea  
Tel: +82 02 858 7810 Fax: +82 02 858 7813/ [www.AscenKorea.com](http://www.AscenKorea.com) /[sales@ascen.co.kr](mailto:sales@ascen.co.kr)

copyright © AscenKorea Inc. All right reserved

	Details	Suggestions	Notes
5	Before handling the PCBA, they must be cooled to 35°C or below after they have gone through the reflow-soldering process, in order to prevent positional shift that might occur when the module is still hot.	1. Can use electric fans behind the Reflow machine to cool them down.  2. Cooling the PCBA can prevent the module from shifting due to fluid effect.	<b>It is very easy to cause positional offset to the module and its patch antenna when handling the PCBA under high temperature.</b>
6	1. When separating the PCBA panel into individual pieces using the V-Cut process, special attentions are needed to ensure there are sufficient gap between patch antennas so the patch antennas are not in contact with one another.  2. If V-Cut process is not available and the pieces must be separated manually, please make sure the operators are not using excess force which may cause rotational offset to the patch antennas.	1. The blade and the patch antenna must have a distance gap greater than 0.6mm.  2. Do not use patch antenna as the leverage point when separating the panels by hand.	<b>1. Test must be performed first to determine if V-Cut process is going to be used. There must be enough space to ensure the blade and patch antenna do not touch one another.</b>  <b>2. An uneven amount of manual force applied to the separation will likely to cause positional shift in patch antenna and module.</b>
7	When separating panel into individual pieces during latter half of the production process, special attentions are needed to ensure the patch antennas do not come in contact with one another in order to prevent chipped corners or positional shifts.	Use tray to separate individual pieces.	<b>It is possible to chip corner and/or cause a shift in position if patch antennas come in contact with each other.</b>

**Note:** References to patch antenna is referred to GPS modules with integrated Patch-on-top antennas (PA/Gms Module Series), and may not be applicable to all GPS modules.

### Other Cautionary Notes on Reflow-Soldering Process:

1. Module must be pre-baked **before** going through SMT solder reflow process.
2. The usage of solder paste should follow “first in first out” principle. Opened solder paste needs to be monitored and recorded in a timely fashion (can refer to IPQC for related documentation and examples).
3. Temperature and humidity must be controlled in SMT production line and storage area. Temperature of 23°C, 60±5% RH humidity is recommended. (please refer to IPQC for related documentation and examples)
4. When performing solder paste printing, please notice if the amount of solder paste is in excess or insufficient, as both conditions may lead to defects such as electrical shortage, empty solder and etc.
5. Make sure the vacuum mouthpiece is able to bear the weight of the GPS module to prevent positional shift during the loading process.
6. Before the PCBA is going through the reflow-soldering process, the operators should check by eyesight to see if there are positional offset to the module.
7. The reflow temperature and its profile data must be measured before the SMT process and match the levels and guidelines set by IPQC.
8. If SMT protection line is running a double-sided process for PCBA, please process GPS module during the second pass only to avoid repeated reflow exposures of the GPS module. Please contact AscenKorea beforehand if you must process GPS module during the 1<sup>st</sup> pass of double-side process.

Figure 6.2: Place GPS module right-side up when running reflow-solder process, do not invert.

9. Module must be pre-baked **before** going through SMT solder reflow process.
10. The usage of solder paste should follow “first in first out” principle. Opened solder paste needs to be monitored and recorded in a timely fashion (can refer to IPQC for related documentation and examples).
11. Temperature and humidity must be controlled in SMT production line and storage area. Temperature of 23°C, 60±5% RH humidity is recommended. (please refer to IPQC for related documentation and examples)
12. When performing solder paste printing, please notice if the amount of solder paste is in excess or insufficient, as both conditions may lead to defects such as electrical shortage, empty solder and etc.
13. The reflow temperature and its profile data must be measured before the SMT process and match the levels and guidelines set by IPQC.

## 6.2 Manual Soldering

### Soldering iron:

Bit Temperature: Under 380°C      Time: Under 3 sec.

### Notes:

1. Please do not directly touch the soldering pads on the surface of the PCB board, in order to prevent further oxidation
2. The solder paste must be defrosted to room temperature before use so it can return to its optimal working temperature. The time required for this procedure is unique and dependent on the properties of the solder paste used.
3. The steel plate must be properly assessed before and after use, so its measurement stays strictly within the specification set by SOP.
4. Please watch out for the spacing between soldering joint, as excess solder may cause electrical shortage
5. Please exercise with caution and do not use extensive amount of flux due to possible siphon effects on neighboring components, which may lead to electrical shortage.
